Re : Approval of ARC 08077

On January 9, 2006, the IACUC reviewed protocol, ARC 08077, "A novel glutathione-S-transferase (GST5mm) knockout mouse model for studying oxidative stress induced alterations in the testis - a possible association with secondary male infertility," and approved:

Species 1: Mice, USDA Category: D, Allowed: 80

IMPORTANT

If this protocol replaces a previously approved protocol, animals currently housed on the previously approved protocol MUST be transferred to the new protocol. The transfer form must be filled out by the PI and submitted to the BRU within 5 days of the new protocols approval. The transfer form and policy can be found in this location on the BRU's website.

<http://intranet.lerner.ccf.org/services/bru/documents/animaltransferpolicyandform.DOC>

Pursuant to the requirements of the Biological Resources Unit, animals cannot be ordered until the authorized individual has provided valid accounting information for the project. Please be advised that there may be a delay in obtaining these animals due to limited housing and the ability of suppliers to provide the requested species. Please discuss your needs with the BRU personnel in advance of orders.

Amendments to protocols involving animals (including a change in the number of animals requested or a change in species) must be reviewed and approved by the IACUC before these changes can be implemented.

PLEASE COMPLETE, SIGN, AND RETURN TO THE IACUC OFFICE, FF40:

Activity # : _____
Accounting Unit # : _____
Authorized by : _____
Name (please print) Ext. Date

Please contact the IACUC office at extension 4-0601 with any questions.
