

Connected Care: Nursing's Role in Care Coordination

May 18, 2014

**Karen Fagnilli, BSN, RN, MPA
Regional Director, Chronic Care Services,
Cleveland Clinic**

Objectives

- **Provide overview of Care Coordination**
- **Discuss goals of Care Coordination as relates to Value-based Care**
- **Discuss how the community hospital-based, Chronic Care Clinics incorporate care coordination into daily operations**

What is Care Coordination?

“Care coordination involves deliberately organizing patient care activities and sharing information among all of the participants concerned with a patient's care to achieve safer and more effective care. This means that the patient's needs and preferences are known ahead of time and communicated at the right time to the right people, and that this information is used to provide safe, appropriate, and effective care to the patient.” (AHRQ)

Value-Based Care

- **Payments based outcomes and value of service on a patient population over the continuum of care**
 - **Transparency**
 - **Accountability**
- **Pressure on healthcare spending**
- **Value= Outcomes/Cost**

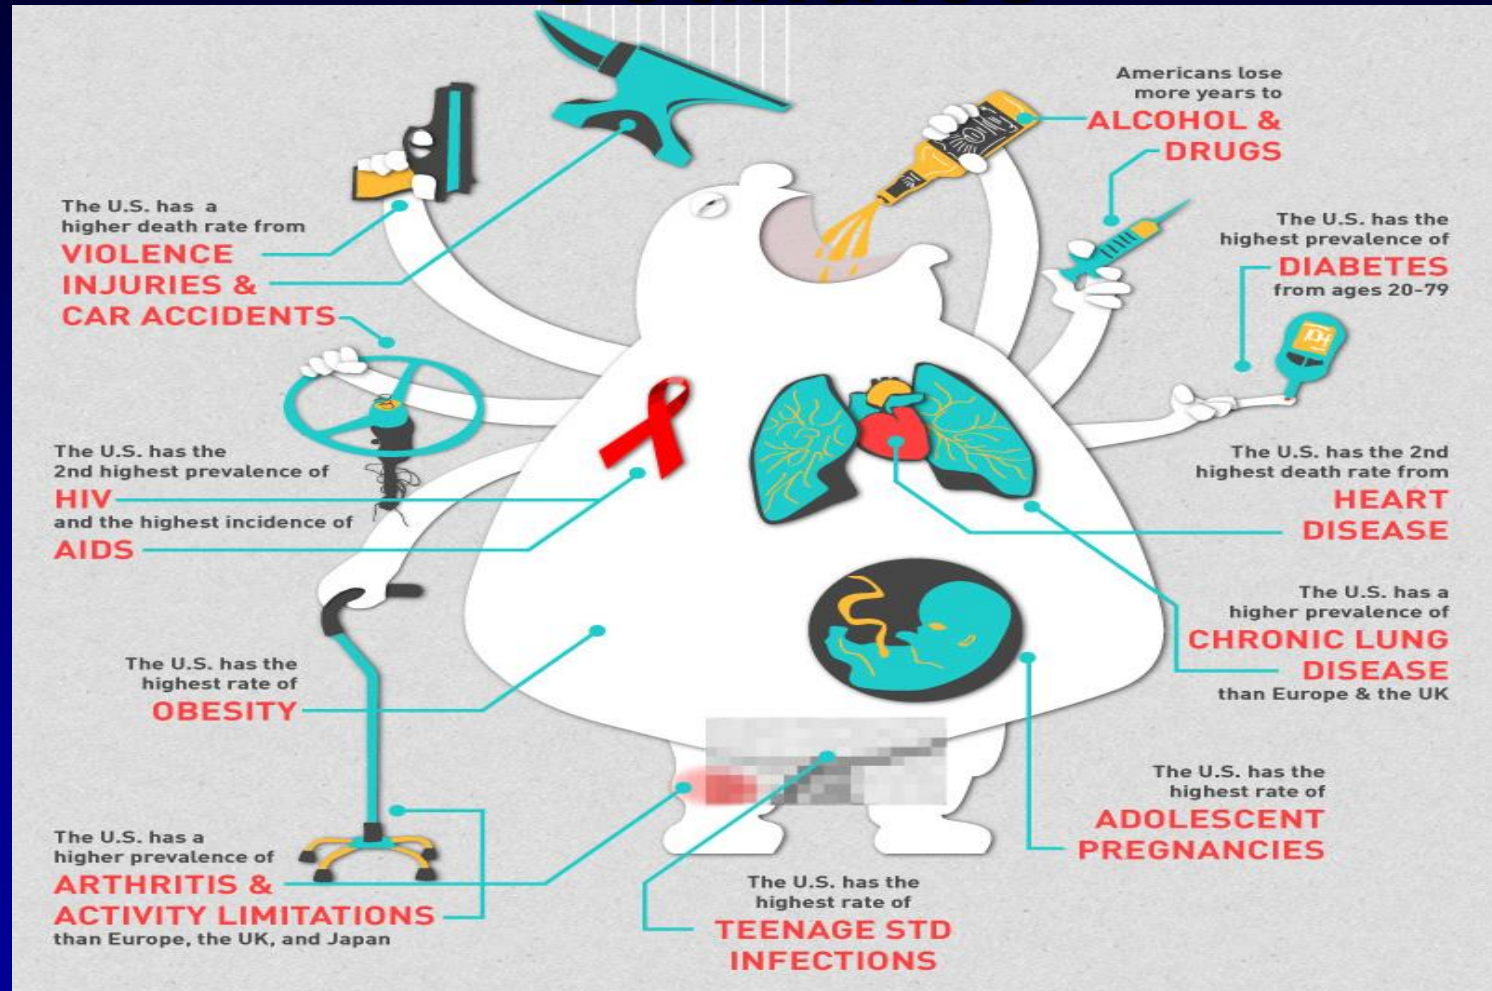

Statistics

- **Americans spent \$12 trillion on healthcare in 2010**
- **17.6% of GDP or \$8,233 per person**
- **Americans rank last in 57 different health indicators in every age group**

America Compared to Other Countries

Key Changes-VBC

- **Accountability**
 - PCP with primary care coordinator
 - Tracking of referrals and pt care
- **Provision of pt support**
 - Team based care across continuum
 - Foster patient engagement, involvement in care
 - Address barriers to care

Key Changes-VBC

- **Build relationships and agreements**
 - **Identify, develop and maintain relationships with outside physicians, hospitals, community agencies**
 - **Develop agreements with these agencies**
- **Develop connectivity thru EMR**
 - **Integrate information needs across continuum— team members, plan of care**

Key Changes Post Discharge

- Follow hospitalized patients during stay
- Review discharge summary
- Clarify outstanding questions with patient, provider
- Coordinate care with home care, caregivers
- Medication review** (unintended discrepancy)
- Follow up on test results performed during hospitalization

Why the Need for Care Coordination?

- **Care fragmented; in silos**
- **Less than optimal hand offs and miscommunication leading to errors**
- **Enormous waste due to unnecessary referrals, duplication of tests, etc.**

Care Coordination at Cleveland Clinic

- **Provided by network of nurses working as integral leaders within and collaboratively with others across the continuum of care**
- **Ensure communication and planning between care providers across continuum**

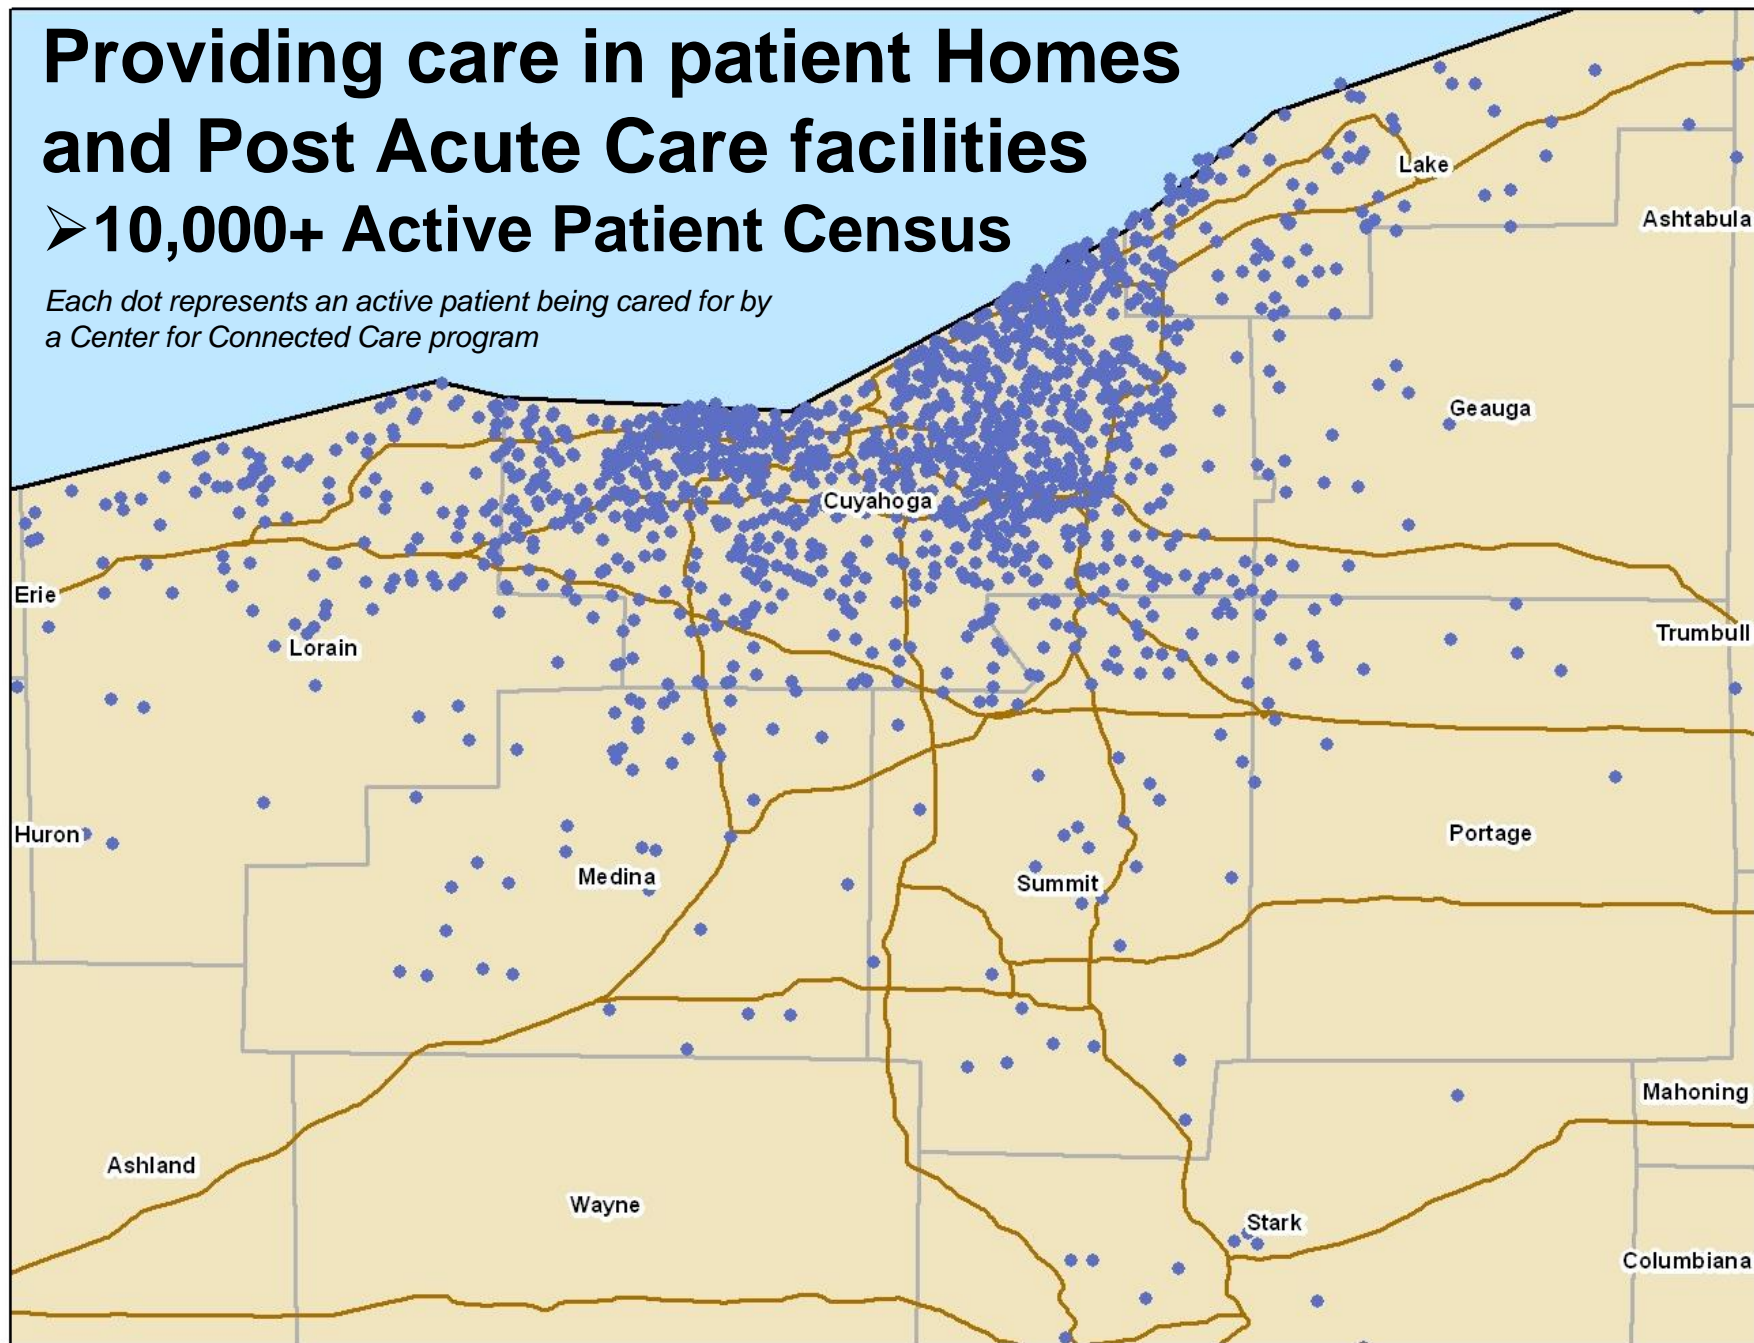

Care Coordination at Cleveland Clinic

- **Facilitate transitions across continuum (including community)**
 - **Primary care**
 - **Specialty care**
 - **Transitional Care**
 - **ECFs, Home Care, Community Resources**
- **Includes preferences for care— including end of life**

Providing care in patient Homes and Post Acute Care facilities

➤ **10,000+ Active Patient Census**

Each dot represents an active patient being cared for by a Center for Connected Care program

Management of High Risk Patients

Assessing High Risk Patients

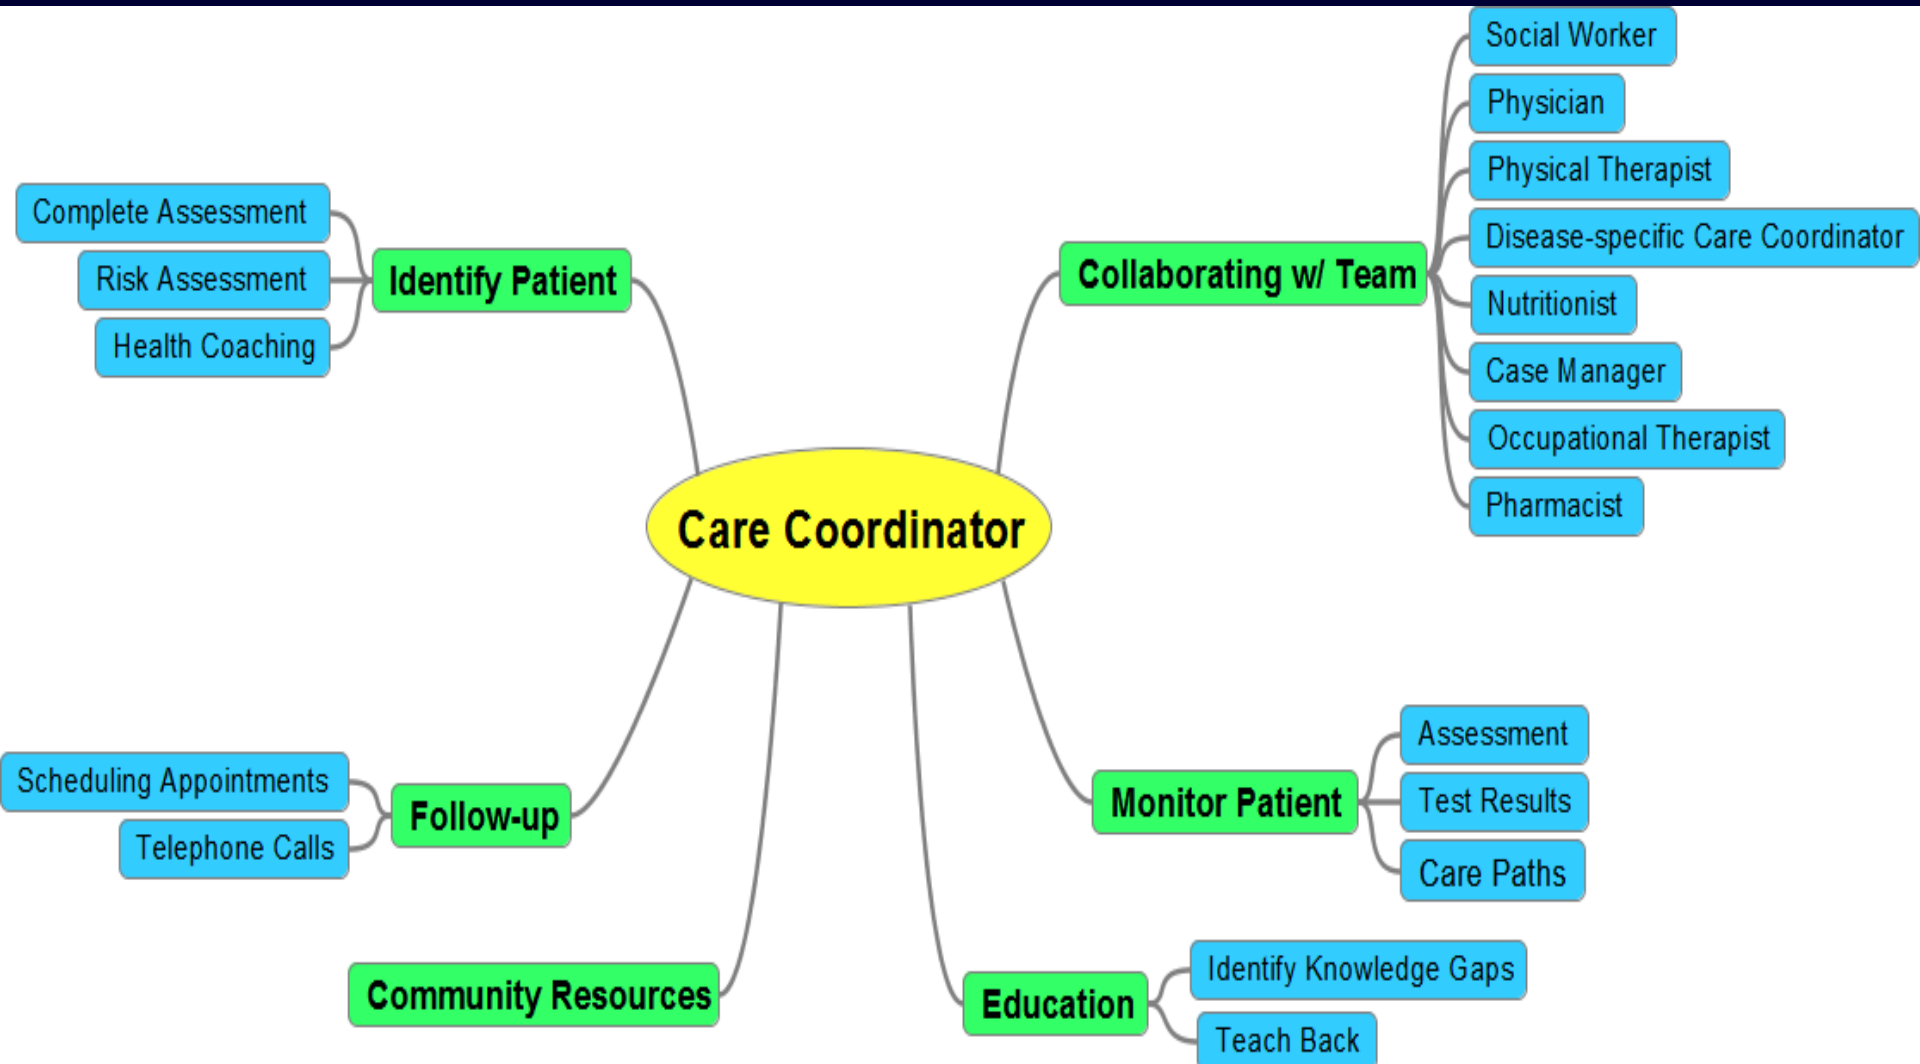

- **Multiple co-morbidities**
- **Poly-pharmacy**
- **Increased age, Frailty**
- **Limited social support**
- **Mental health/ substance abuse**
- **Frequent hospitalizations, ED visits**
- **High cost**
- **“Gut” reaction**

High Risk Populations

- **Diabetes**
- **Hypertension**
- **Chronic Kidney Disease**
- **Congestive Heart Failure**
- **Malignancies**
- **CAD**
- **COPD/ Asthma**

Role of the Care Coordinator

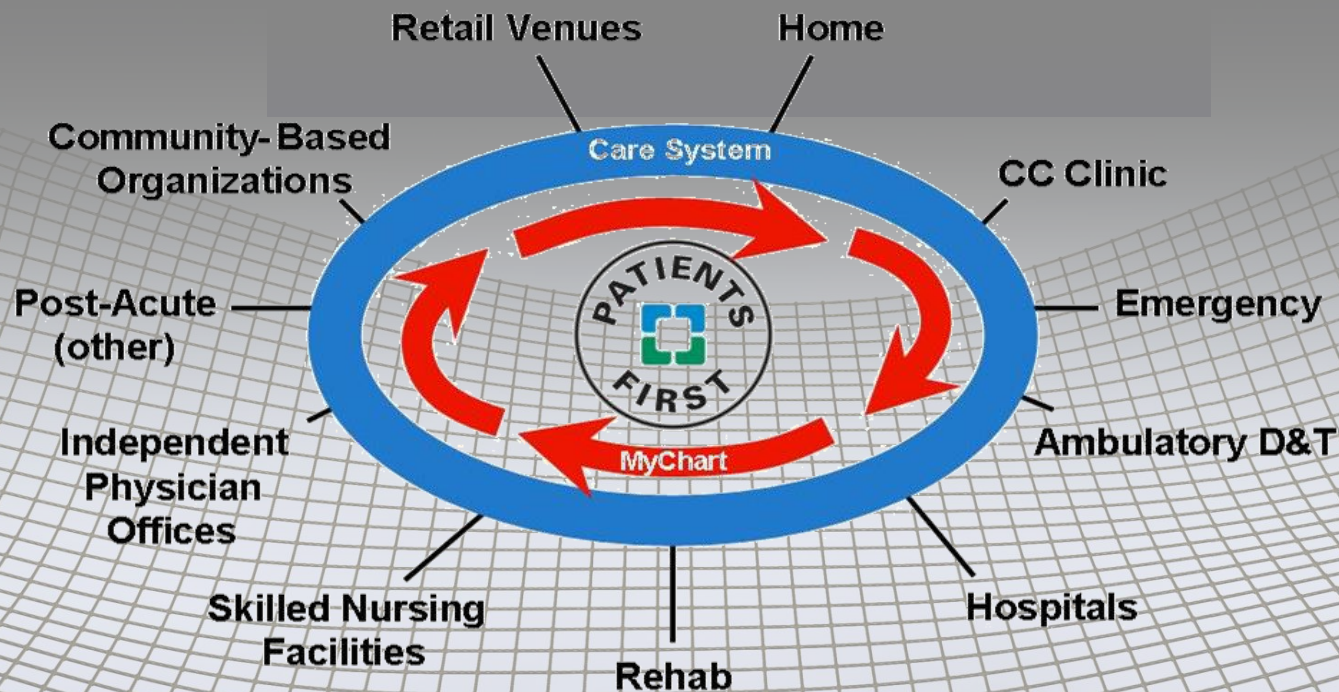

Coordinators - Definitive Roles

<u>Primary Care</u>	<u>Specialty Care</u>	<u>Transitional Care</u>
<ul style="list-style-type: none"> • Facilitate seamless cross continuum care for high risk patients • Targeted outreach • Ongoing assessment & monitoring • Partner with patients to achieve health management goals • Main point of contact for patient, family and providers thru the care process 	<ul style="list-style-type: none"> • Collaborate with primary care coordinators in management of high risk patients within their specialty practice • Follow recommended care paths; facilitating transitions of care; transition back to primary care • Post-discharge phone calls, follow up appts, post-discharge clinic visit, transition planning, patient self management support, medication updates 	<ul style="list-style-type: none"> • Includes specialty care advocates, care managers, home care nurses • Work in acute, post-acute, surgical & procedural settings • Facilitate transitions for high risk patients • Episode focused • Collaborate with primary care coordinators & specialty care coordinators to manage care • Assure follow up appts, transition planning, patient self management support, medication updates

Critical Role of Care Coordination

The “Net”

Care Coordinator

Job Summary:

Works collaboratively with multidisciplinary care team staff across the continuum of care to provide care and disease management to high risk patients identified in the ambulatory setting,

focusing efforts on patient outreach and coordination of care for a panel of patients to achieve:

- **optimal outcomes and**
- **promote wellness,**
- **decreasing preventable ED visits and**
- **readmissions while**
- **improving patient satisfaction.**

Job Responsibilities

- **Assessment**
- **Coordination**
- **Education/Advocacy**
- **Quality Improvement**

Job Responsibilities

Assessment:

- Conducts comprehensive clinical assessments that include disease-specific, age-specific, medical, behavioral, pharmacy, social and end of life needs of each patient.
- Actively involves the patient and family regarding coordination of their care. Shares this information with the healthcare team, patient, and family. Works collaboratively with interdisciplinary team to develop goals and plan interventions to maximize patient outcomes.
- Monitors patient compliance with plan of care. Performs reassessments regarding patient progress toward goals and updates plan of care as appropriate.
- Ensures care gaps are closed around specialty disease/chronic disease.

Job Responsibilities

Coordination:

- Often serves as primary patient contact for team related to condition; facilitates access to services.
- Links members of the patient care team. Organizes tasks and responsibilities around the patient and family needs.
- Serves as the liaison with patients and families to physicians, clinical staff.
- Assists in managing transitions of care across care settings, ensuring optimal communication and planning between care providers across different settings.
- Identifies barriers to receiving care and facilitates solutions.
- Connects patient back to primary care physician and primary care coordinator team as applicable.
- Liaison with other partner care coordinator teams across settings (e.g. transitional care). Partners with other care coordinator teams (e.g. primary and transitional care). Team includes Social Work, Rehabilitation, Pharmacy, Palliative Care and others.
- Defines and ensures compliance with disease-specific care paths for specialty care or chronic disease.

Job Responsibilities

Education/Advocacy:

- **Advocates for patient and families, responds to and facilitates resolution of patient/family questions and concerns.**
- **Works with the patient and family to assess current knowledge, health literacy, and readiness to change, utilizing teach back to assess level of knowledge.**
- **Coaches patient and family on self management support including setting long and short term goals (including acute exacerbation management).**
- **Education about managing a specialty condition, including prevention and health maintenance tasks.**
- **Education and connection to other care providers and community resources to enhance care.**

Job Responsibilities

Quality Improvement:

- Works with practices on quality and process improvement initiatives. Assists in education, auditing quality, data analysis, and workflow processes.
- Outcome metrics include (but are not limited to) patient satisfaction, readmissions, cost per case, and compliance with care paths or evidence-based
- guidelines.

Chronic Care Services

- **First clinic was Congestive Heart Failure which began in 1999**
- **Ensuring patient safety and quality**
- **Physician directed, nurse managed clinics using evidence based practices**
- **Fostering a healing environment that is patient and family centered.**

Purpose of the Chronic Care Clinics

- **To provide consistent, high level care to the patient who is in need of on-going follow-up**
- **To provide an intermediary care site between the physician office and the hospital**
- **To assist in the improved quality of life of this population**
- **To improve patient satisfaction**

Purpose of the Chronic Care Clinics

- To decrease cost of care by reducing readmission rates and ED visits**
- Ongoing Education and Self-Management skills for the patient and their family**
- Ongoing communication and plan of care with physician and other disciplines across the continuum**

Chronic Care Services

- **Leveraging technology to support nursing practice.**
 - **Documenting in My Practice since 2008**
 - **Paperless since 2009.**
- **Maintaining regulatory and practice compliance.**
- **Supporting life long learning and teaching.**
- **Scope and complexity of patient services to be provided by each department will be determined at the initial outpatient assessment**

Chronic Care Clinics

- **CHF/CKD which includes services for CHF, CKD, Anemia and Blood Management, Osteoporosis,**
- **Anticoagulation Support**
- **Diabetes Education and Self-Management which includes Dietitian support-MNT for Diabetes and other chronic diseases**
- **Wound Clinic**
- **Other Services – Dialysis and Health Heart Screening**

Services Offered Through Heart Failure Center (CHF/CKD)

- Participate in education and discharge planning of CHF inpatients
- Initial Assessment and Educational / Adherence needs
- Patient and Family Education
- Symptom Management
- Cardiac Monitoring
- Fluid Management
- Lab Assessment
- BP Monitoring
- IV Medication
- Follow-up Assessment
- Goal Setting
- Anemia Management
- CKD Management
- Blood Management
- Osteoporosis

Anticoagulation Clinic Services Offered

- **Comprehensive education regarding anticoagulation therapy**
- **Point of Care monitoring and review of the PT/INR**
- **Patient assessment**
- **Dosage adjustment of anticoagulation**
- **Follow-up**
- **Goal setting**
- **Home Monitoring Program**
- **Medication adherence**

Diabetes Services Offered Through Comprehensive DSME/T

- **Initial assessment/Knowledge-Learning needs assessment**
- **Lab assessment**
- **Single and Group Sessions: Patient/family education**
- **Behavioral Goal Setting**
- **Follow-up /DSMS (diabetes self management support)**
- **Community Support programs held several times a year with Guest speakers.**
- **Support Groups for patient after completing program.**

Wound Clinic

- **To provide wound treatment/support**
- **Physical assessment**
- **Disease management strategies**
- **Nutritional Needs**
- **Education for all aspects of wound management**
- **Goal Setting**
- **Ostomy Care**

Patient and Family Involvement

- **Involve pt and caregivers in planning & assessment**
- **Safe, timely, efficient patient-centered care**
- **Health Coaching to promote patient engagement, determine self care goals**

Patient /Family Education Program

Behavioral Goals Towards Self Management

- **Nutritional Management**
- **Physical Activity**
- **Medications**
- **Monitoring**
- **Symptom Management**
- **Preventing, Detecting, Treating acute complications**
- **Risk Reduction**
- **Psychosocial Adjustment**
- **Goal Setting**

The Chronic Care Model

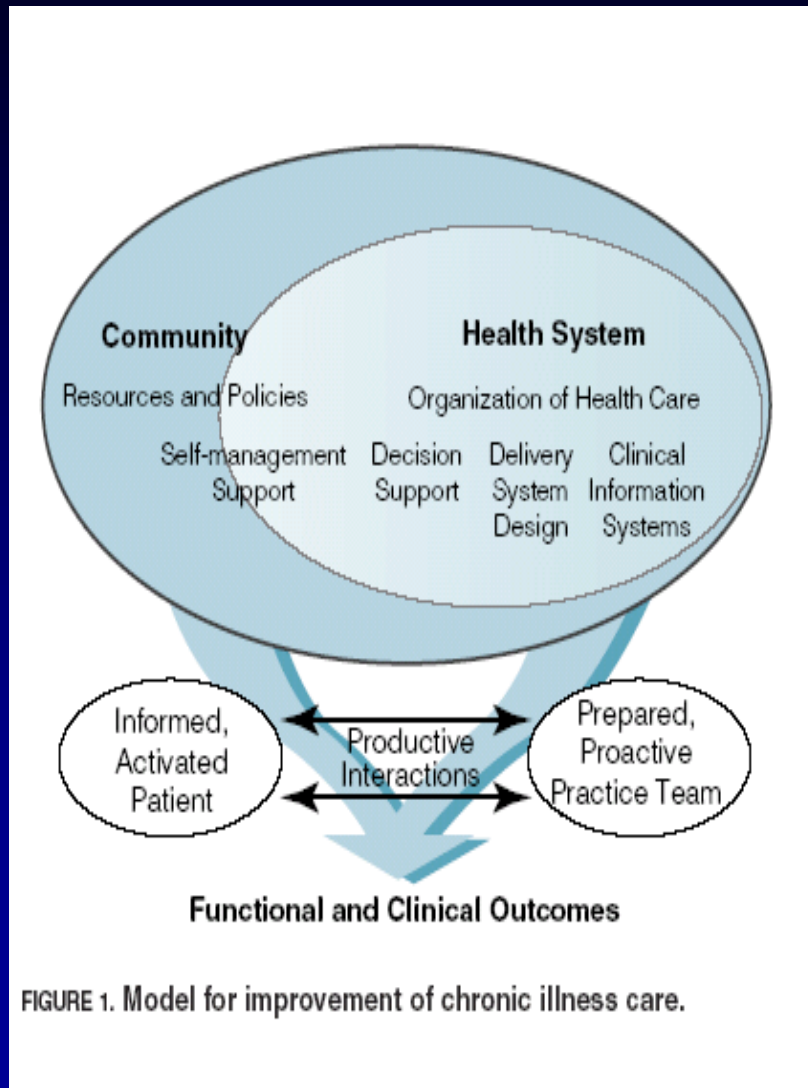

FIGURE 1. Model for improvement of chronic illness care.

- **Health System** - Create a culture, organization and mechanisms that promote safe, high quality care
- **Delivery System Design**- Assure the delivery of effective, efficient clinical care and self-management support
- **Decision Support** -Promote clinical care that is consistent with scientific evidence and patient preferences
- **Clinical Information Systems**- Organize patient and population data to facilitate efficient and effective care
- **Self-Management Support** - Empower and prepare patients to manage their health and health care
- **The Community** - Mobilize community resources to meet needs of patients

Relationship-Based Care

- The RBC model provides a conceptual framework with a vision for care and underlying values and principles, a practical infrastructure for putting it into action, the education and leadership necessary to make it happen and ways to measure evidence of success.
- Care takes place in a Caring and Healing Environment with the Patient and Family at the center.
- Six dimensions are critical for successful transformation:
 - Leadership
 - Teamwork
 - Professional Nursing Practice
 - Patient Care Delivery System
 - Resource Driven Practice
 - Outcomes Measurement

Cleveland Clinic Zielony Nursing Institute Professional Practice Model

- **Colleagues in Care Professional Practice Model recognizes the Nursing Institute's "Patients First" focus and our shared vision.**
- **Our model is based on theories which enlighten the model. These theories are:**
 - **Shared Vision,**
 - **Relationship Based Care**
 - **Thinking in Action**
 - **Serving Leader**
- **Colleagues in Care Professional Practice Model has 4 components which are the observable manifestation of the model in practice. They are:**
 - **Quality and Patient Safety**
 - **Healing Environment**
 - **Research and Evidence Based Practice**
 - **Professional Development and Education**

Professional Practice Model

Shared Vision-Peter Senge, PhD

Relationship-based Care-Marie Manthey

Thinking in Action-Patricia Benner, PhD, RN, FAAN

Serving Leader-Ken Jennings, PhD

QUALITY & PATIENT SAFETY

- National quality indicators
- Performance improvement
- Safe clinical care supported by appropriate staffing
- Competent workforce
- Skilled communications and handoff across the continuum of care
- Change management
- Safe staffing
- Fiscally responsible
- Ongoing Measures

HEALING ENVIRONMENT

- Empathetic, respectful, compassionate and holistic care
- Effective communication and relationship management
- Patient and family centered care
- Shared effective decision-making
- Interdisciplinary collaboration
- Embrace diversity
- Leverage technology to support practice
- Culturally sensitive
- Patient experience

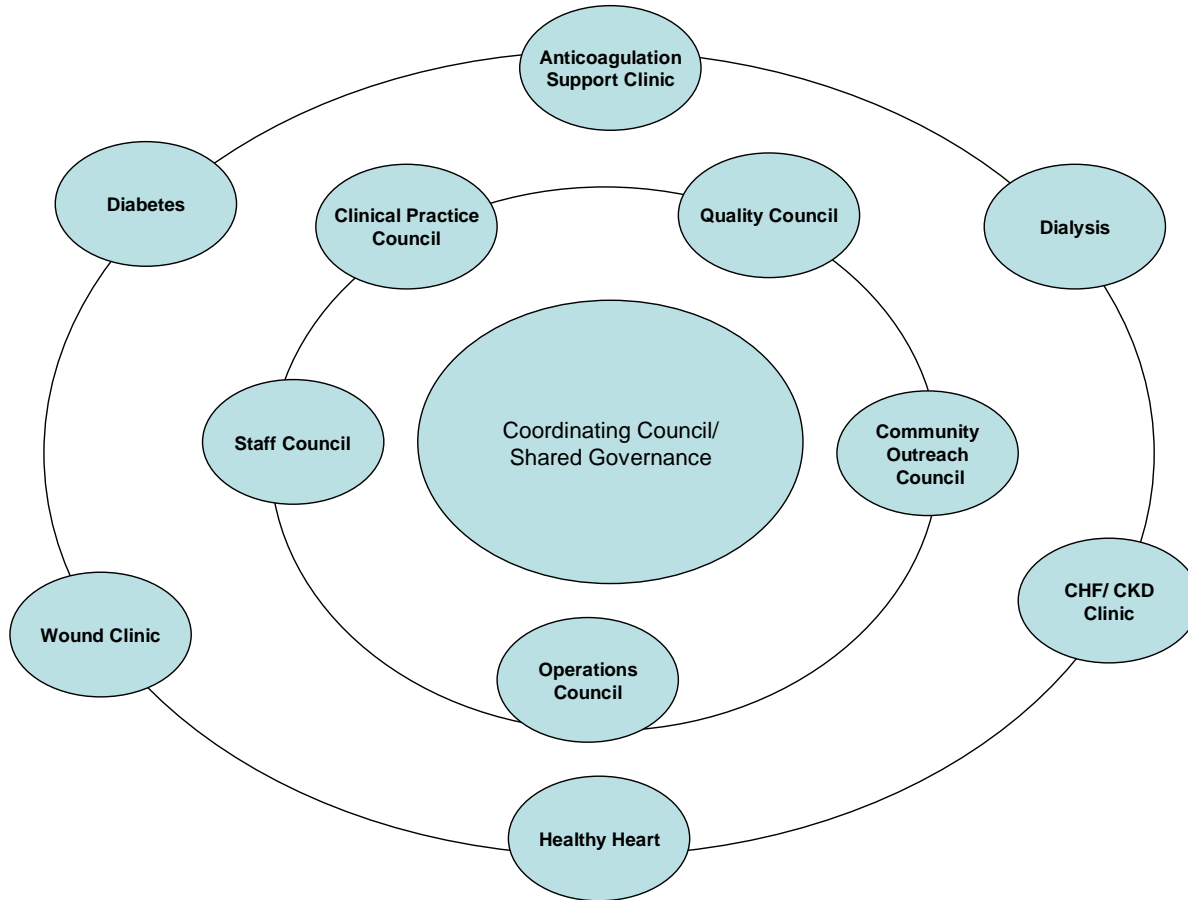

RESEARCH & EVIDENCE-BASED PRACTICE

- Evidence-based clinical practice and management
- Nursing Knowledge
 - Generation
 - Translation
 - Dissemination
- Innovation
- Clinical inquiry
- Standardization
- Integrate technology
- Care delivery using the nursing process

PROFESSIONAL DEVELOPMENT & EDUCATION

- Successful on-boarding
- Competency
- Clinical Ladder
- Certification
- Leadership skills
- Shared Governance
- Academic partnership
- Elevate the professional image of nursing
- Involvement in professional organizations and communities
- Life-long learning

Chronic Care Shared Governance

Councils/Teams

- **SG Coordinating Council**
- **Clinical Practice Council**
 - **Informatics**
 - **P&P**
 - **Research**

 - **Safety**
 - **PI**
 - **Medical Record Review**
- **Operations Council**
- **Staff Council**
 - **Onboarding**
 - **Recognition**
- **Community Council**

The Importance of Data

- Each Clinic has multiple Performance Improvement Measures (PIM) that are reported monthly.
- Each PI measure has target and goals set yearly based on national benchmarks and historical data.
-
- Data is gathered from variety of sources including – SQL reports, EPSI, and EPIC.
- Database Development Evolution from manual collection to MS Access Database to Web-based Data Entry to Epic Reporting.

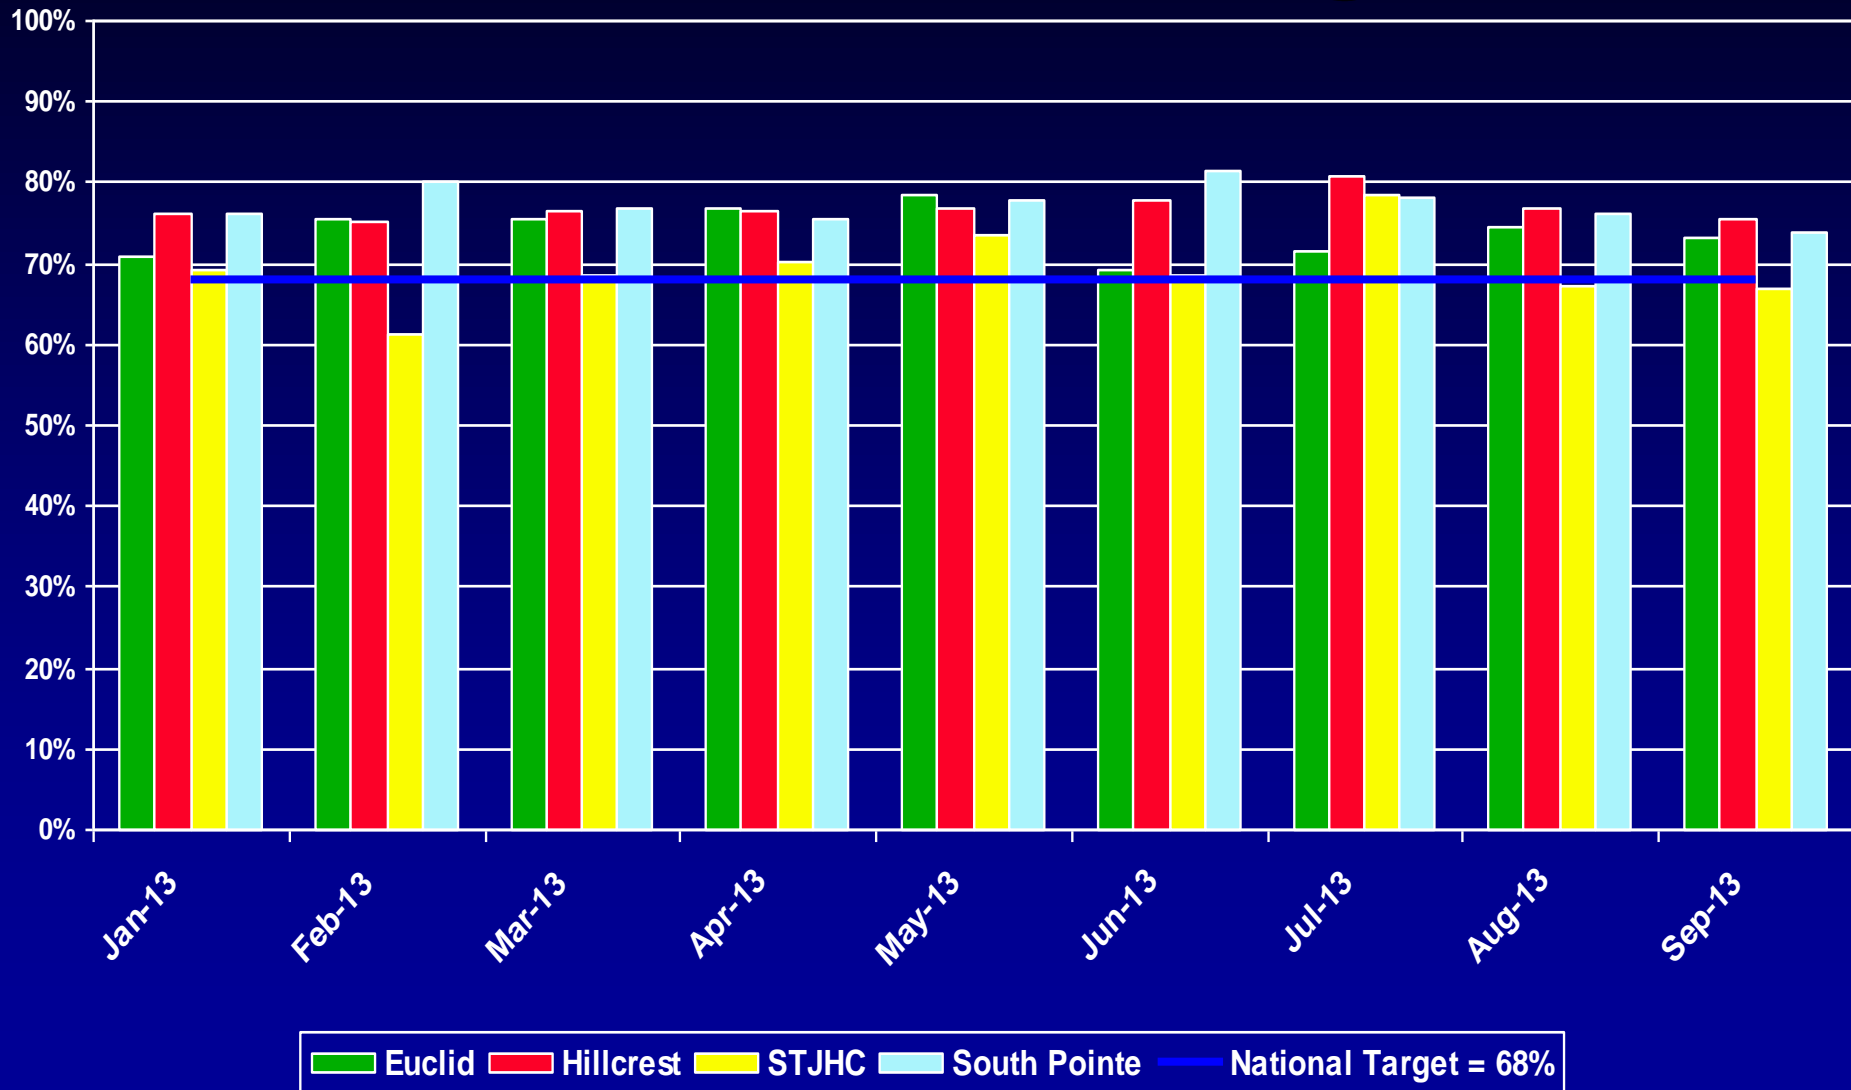

Performance Improvement Monitoring

- Rate of complications
- Hospital admissions
- Reduction in 30-day admissions
- Patient and caregiver satisfaction
- Frequency of preventive services
- Cost of care
- ED visits
- Improved outcomes

Percent of Patients in Therapeutic Range

Chronic Care Clinics Active Patient Volume by Year

**Data includes Euclid, Hillcrest, South Pointe, and Stephanie Tubs Jones Health Center

Documentation

Flowsheets

- Flowsheets are design to allow us to collect data that can be abstracted from chart for reporting easily.
- There are two type of Flowsheets
 - Doc Flowsheet – Where enter the data during the visit with the patient.
 - Review Flowsheets - allows to review the data over time and also add other key information like labs, weight,...
- The Chronic Care Education Flowsheet is used by everyone and collect key information about teaching method, safe scores, and Advance Directives.
- Each Clinic has a specific Flowsheet that design to details for specific condition

“Patient Lists”

The screenshot shows a software interface for managing patient lists. The top menu bar includes options like 'Create', 'Properties', 'Remove', 'Add Patient', 'Copy', 'Paste', 'Open Chart', 'Reww', 'Work List', 'Sign Out Rpt', 'Patient Report', and 'Insurance Facesheet'. On the left, a tree view shows 'My Patient Lists' with a sub-list 'Cheryll' selected. Below this, there are folders for 'Lab Values Testing', 'MyList', 'test', 'Shared Patient Lists', 'System Lists', and several 'System Lists' (EU, HL, SP), 'Chart Completion', and 'Discharge Lists'. The main area displays a table titled 'Cheryll (45 Patients)' with 'as of 1052' patients. The table has columns for Bed, Patient Name, DOB, MRN, Status, Acknow Orders, Signed/, Dischar Instruct, Clinicia Collect, Med Overdue, Transpc, Wt (kg), and Ht. Two rows are visible: one for 'EU-ETP-1' with patient 'Zzzped Fourwe' (DOB 12/27/21, MRN <E1304) and another for 'EU-ETP-1' with patient 'Zzzproc Empon' (DOB 9/30/19, MRN 938194, Status Inpatient). The first row shows a weight of 4.5 kg (9 lb 14.7 oz) and a date of 1/27/20. There are also icons for a folder and a clock in the Acknow Orders and Med Overdue columns respectively.

Bed	Patient Name	DOB	MRN	Status	Acknow Orders	Signed/	Dischar Instruct	Clinicia Collect	Med Overdue	Transpc	Wt (kg)	Ht
EU-ETP-1	Zzzped Fourwe	12/27/21	<E1304								4.5 kg (9 lb 14.7 oz); 1/27/20	0600
EU-ETP-1	Zzzproc Empon	9/30/19	938194	Inpatient								

Patient Lists provide a grouping of specific patients who meet selected criteria. Patient lists can be created by the system, created to be shared, and each end user can create their own.
