Subject: Dr. Agarwal

Hello Dr. Agarwal,

It has been a great pleasure being here at Cleveland Clinic for the wonderful training program in Assisted Reproduction (IVF/ICSI, Module 5A). This task would have been impossible for me to achieve in this duration of time anywhere else because first off all no world class center would have a trainee for so long (3 months) in there labs and the manpower involved in this type of training program with the state of art technical people involved is a difficult combination to find.

Well it is not this only which I am impressed about, but the warm welcome and the comfort levels I shared with all the research fellows that had made my training a wonderful experience.

This training is indeed a experience which I will love to remember and is a very important step in my life for the years to come, as a clinician and also as an ART personnel, trust me had I not been here I would never had taken this part so seriously and dedicated myself to it.

My thanks to everyone, especially to people who helped in my daily training Dr. Hussein and Kelly - without whom this would have been impossible. I really appreciate all this and thank you all for this wonderful experience and for a great time spent here with all of you at Cleveland Clinic. I am extremely proud to get trained in this institution headed with a Program Director with such a great vision.

I hope to have you in India soon at our center.

Thanking you and best wishes.

Pratima Sekhar, MD
ART Training Candidate
