Dear Dr. Agarwal,

It is a true pleasure to share my impressions on the 2014 Summer Internship Program, in which I participated as a Mentor. It was a beautiful experience and I feel honored to have been given the trust and opportunity to contribute to this exceptional event.

This Program has all the rights to be called state of the art, as it provides education on all the levels of a scientific life: theoretical knowledge, practical training as well as data interpretation and presentation. During a period of 7 weeks, the interns are exposed to a wide array of interesting lectures and real-life research practice, which combined with the possibility to interact face to face with renowned clinicians, academics and scientists leads to an incredible foundation for a successful future career.

At the same time, I sincerely appreciate the Program's values of diligent work, honesty and team play, all of which are indispensable for a blooming professional as well as personal growth. It was exciting to witness the progress and transformation of the interns over the course of the Program. I am pleased to say that their devotion and energy invested in their tasks, coupled with all the support from the CRM staff and Mentors has led to the obtention of valuable scientific data as well as interesting publications.

I wish to compliment to all the organizers of the Summer Internship, and especially to you, Dr. Agarwal. Each and every year you go to great lengths to prepare what I consider to be the most prestigious summer
program offered to the student all over the US and world. It is your incredible commitment to educate and train the next generation of physicians and researchers what makes this Internship so special. Thanks to you and all the CRM associates the Program is constantly raising the bar in complexity, novelty and efficiency.

In conclusion, I am proud to be associated with the Summer Internship Program and I fully support all the activities related to it. I am confident that this event can help national as well as international students to evolve as young professionals with benefits to their communities as well as the society at large.

With best wishes,

MSc. Eva Tvrdá, PhD.
